

**Orthocenter is a long-established orthodontic company, which has been growing for all its 32-year history. It currently operates 45 specialised orthodontic centres throughout the Netherlands. Orthocenter also has ISO 9001-2000 certification, representing its focus on high standards.**

Working at Orthocenter is working in a modern practice located in the Netherlands, a beautiful small country that offers a lot of opportunities and things to do in your spare time. The Netherlands is a friendly, multicultural country with a no-nonsense mentality. It has a variety of landscapes, including a long coastline with big beaches, lots of dunes and some forest. It has old and new cities

as well the countryside full of sheep and cows. It has islands in the north, the famous Delta Works in the South and Amsterdam, the cultural centre. The main airport, Schiphol is centrally located in the western part of the Netherlands close to Amsterdam. From there, all of Europe is accessible within a few hours: in just 3,5 hours, you can go to Bucharest by plane or to Paris by train.

## For several regions in the Netherlands, Orthocenter requires the services of a: **QUALIFIED ORTHODONTIST**

Applicants must be fully qualified to practice orthodontics, be able to communicate well and be quality conscious.

As an orthodontist, you will be responsible for patient care in one of our centers. In addition to an excellent net income and pleasant working atmosphere, Orthocenter provides the

opportunity for research and publication. Part-time employment may also be discussed. Orthocenter will fully support expats with immigration and relocation to the Netherlands.

Orthocenter's central administration handles all financial and general administrative matters as well as management support.

*Mali Daian (from Romania), orthodontist at Orthocenter: 'There are many advantages to working for Orthocenter. One of the main benefits is the fact that I spend very little time on administrative tasks and can concentrate on what I enjoy doing most. Orthocenter endeavours to keep up with the latest developments in orthodontic care. The quality methods used in the Netherlands are similar to those used in Greece. In fact, apart from the language and the weather, many things are the same. I found it difficult to learn the language, but, other than that, I immediately felt at home in the Netherlands. Fortunately I am now familiar with both the language and the country and I can communicate with patients very well, which is essential in my profession. Now the only thing left unresolved is the weather.'*
